SUMMARY

Business Intelligence Engineer with an M.S. in Information Technology (3.86/4.0) and 3+ years of experience in data quality, KPI reporting, and business analytics. Built retail and web analytics platforms processing **50M+ transactions and events** using SQL, Python, BigQuery and Looker.

EDUCATION

Belhaven University 01/2025 – 05/2026
M.S. Information Technology *Jackson, MS*

Jawaharlal Nehru Technological University 08/2016 – 09/2020
B.S. Computer Science *Hyderabad, India*

SKILLS

- **Languages:** SQL, Python, DAX, Power Query (M)
- **BI & Visualization:** Power BI, Tableau, Looker, Amazon QuickSight, Excel
- **Data Modeling:** Dimensional Modeling, Star Schema, Snowflake Schema
- **Data Transformation:** dbt, ETL/ELT, Data Cleaning, Data Reconciliation
- **Databases & Warehouses:** Snowflake, BigQuery, Redshift, PostgreSQL, MySQL
- **Cloud & DevOps:** AWS (S3, EMR), Docker, Git, GitHub
- **Gen AI & Machine Learning:** Scikit-learn, LLMs, RAG, Prompt Engineering

WORK EXPERIENCE

IT World Web 12/2022 – 12/2024
Executive Consultant – Business & Data *Bengaluru, India*

- Built an **AI-assisted** QC validator for 25 leadership KPIs, cutting weekly validation from 2 hours to under 2 minutes through definition-based checks and AI-generated exception summaries.
- Led **UAT** for migration of 2M+ customer records to a cloud warehouse, identifying 400+ defects before launch, with zero critical issues in the first 90 days after cutover.
- Engineered a **funnel analytics pipeline** to identify conversion bottlenecks and analyze 500+ manual-review rules, driving automation that reduced review volume by 25%.

Careernet Technologies 04/2021 – 11/2022
Associate Consultant – Business & Data *Bengaluru, India*

- Investigated **230 reporting** discrepancies in six months, traced 52% to inconsistent business definitions, and drove remediation that reduced repeat exceptions by 34%.
- Engineered Amazon **QuickSight** dashboards to automate KPI tracking and operational reporting, reducing weekly Business Review preparation time by 12 hours.
- Defined **source-to-target** mappings and data validation rules, reducing reporting defects by 35% and shortening analytics turnaround by one week per cycle.

SELECTED BUSINESS INTELLIGENCE PROJECTS

Basketpulse - Retail Analytics Platform | 🔗 03/2026 – Present
Google BigQuery, Python, Data Modeling, Looker, CI/CD

- Engineered a **BigQuery–Looker** platform powering 3 dashboards by modeling nested transaction facts; generated 50M transactions / 312M line items in 21 minutes using Python.
- Eliminated line-item expansion for basket-level KPIs by precomputing transaction totals in nested facts with daily partitioning and clustering by store, customer, and channel.
- Implemented atomic partition replacement with count/revenue reconciliation and retry-safe submission; automated pytest, static **LookML** checks, and smoke tests through GitHub Actions.

Manufacturing Analytics Dashboard | 12/2025 – 04/2026

Python, SQL, Microsoft Fabric, Azure Event Hubs

- Engineered a **Microsoft Fabric** telemetry pipeline across Event Hubs, Eventstream, and Eventhouse; benchmarked local generation of 100K events in 5.49 seconds.
- Built KQL event deduplication and hourly risk aggregates, powering 4 dashboard tiles for manufacturing risk, modeled cost exposure, and ingestion-delay monitoring.
- Enabled resumable telemetry replay using **atomic checkpoints** after broker acknowledgment, workload checksum validation, and single-writer locks.

Web Analytics BI Platform | 06/2025 – 10/2025

SQL, LookML, Python, GA4, ETL, BigQuery ML

- Built a GA4–BigQuery–Looker platform processing **50M events** across 90 days, delivering incremental session models for acquisition, retention, and conversion analytics.
- Reduced median dashboard query time 75% (12s to 3s) and bytes scanned 90% (20GB to 2GB) through session preaggregation, date partitioning, and clustering.
- Reduced refresh scope 97% (90 days to 3 days) with incremental partition rebuilds; validated correctness through **7 SQL assertions,** Python reconciliation, and 5 benchmark query pairs.

CERTIFICATIONS & TRAININGS

- Analytical SQL for Developers – Oracle 07/2026
- Data Engineering on AWS Foundations – AWS 04/2026
