SUMMARY

Data Analyst with an M.S. in Information Technology (3.86/4.0) and professional experience in data quality, business analytics, and data migration. Built a BigQuery ecommerce platform processing **50M records** and a GA4 purchase-prediction pipeline analyzing **4.3M events** using SQL, Python, and statistical analysis.

EDUCATION

Belhaven University 01/2025 – 05/2026
M.S. Information Technology *Jackson, MS*

Jawaharlal Nehru Technological University 08/2016 – 09/2020
B.S. Computer Science *Hyderabad, India*

SKILLS

- **Languages:** SQL, Python (Pandas, NumPy), R, Scala
- **Data Analytics:** Exploratory Analysis, Statistical Analysis, Hypothesis Testing, A/B Testing
- **Data Visualization:** Tableau, Power BI, Looker, Advanced Excel
- **Databases & Warehousing:** PostgreSQL, MySQL, Google BigQuery, Snowflake, Amazon Redshift
- **Data Manipulation & Reporting:** Data Cleaning, Data Validation, Data Transformation, Ad Hoc Analysis
- **Cloud & DevOps:** AWS (S3, EMR), Docker, Git
- **Gen AI & Machine Learning:** Scikit-learn, LLMs, RAG, Prompt Engineering

SELECTED DATA ANALYST PROJECTS

Product Analytics Platform | 🔗 03/2026 – Present
SQL, Funnel Analysis, Tableau, BigQuery

- Architected a **BigQuery** product analytics mart for 50M sessions, using date partitioning and clustering to power conversion funnels, cohort retention, and Tableau reporting.
- Accelerated funnel queries by **75%** (20s to 5s) by precomputing ordered event timestamps and querying partition-filtered session aggregates.
- Engineered reliable refreshes with 6 prepublication validation gates, transactional partition replacement, snapshot recovery, and GitHub Actions automation to block invalid dashboard updates.

Ecommerce Sales Conversion Analytics | 🔗 09/2025 – 04/2026
SQL, Google BigQuery, Looker Studio, Data Modeling, ETL, CI/CD

- Engineered a BigQuery ecommerce analytics platform processing **50M records** into session, order, and SKU models, powering 10 reports and 8 Looker Studio views.
- Reduced **query runtime by 60%**, from 50s to 20s, by materializing date-filtered records once and reusing shared aggregates across 10 analyses.
- Built transactional report delivery with schema validation, audited refreshes, and integrity-checked rollback; automated 136 regression checks through GitHub Actions.

GA4 Purchase Prediction Analytics | 🔗 06/2025 – 10/2025
Python, SQL, NumPy, Scikit-learn, Matplotlib, Docker

- Built a GA4 purchase-prediction pipeline with BigQuery SQL and **Scikit-learn**, analyzing 4.3M events across 252K users with temporal validation.
- Accelerated feature aggregation 42× (11.84s → 0.28s) on 1M events using NumPy vectorization and categorical encoding, reducing DataFrame memory 80%.
- Strengthened batch inference with **SHA-256** model verification, atomic exports, and drift monitoring; automated regression tests and CLI checks.

E-commerce Funnel Retention Analytics | 🔗 01/2025 – 04/2025

DuckDB, Python, SQL, Apache Parquet, pytest, GitHub Actions.

- Built a **Python–DuckDB** analytics pipeline processing 1M events across 390K sessions, generating funnel and retention models in 16.2 seconds.
- Reduced median funnel-summary query time from 5.69 seconds to 1.81 milliseconds on 102K events by materializing SQL models and validating result equivalence.
- Engineered reliable ingestion with SHA-256 deduplication, quality gates, and atomic publication; automated 29 regression tests through GitHub Actions.

WORK EXPERIENCE

IT World Web 12/2022 – 12/2024

Executive Consultant – Business & Data *Bengaluru, India*

- Built an **AI-assisted** QC validator for 25 leadership KPIs, cutting weekly validation from 2 hours to under 2 minutes through definition-based checks and AI-generated exception summaries.
- Led **UAT** for migration of 2M+ customer records to a cloud warehouse, identifying 400+ defects before launch, with zero critical issues in the first 90 days after cutover.
- Engineered a **funnel analytics pipeline** to identify conversion bottlenecks and analyze 500+ manual-review rules, driving automation that reduced review volume by 25%.

Careernet Technologies 04/2021 – 11/2022

Associate Consultant – Business & Data *Bengaluru, India*

- Investigated **230 reporting** discrepancies in six months, traced 52% to inconsistent business definitions, and drove remediation that reduced repeat exceptions by 34%.
- Engineered Amazon **QuickSight dashboards** to automate KPI tracking and operational reporting, reducing weekly Business Review preparation time by 12 hours.
- Defined **source-to-target** mappings and data validation rules, reducing reporting defects by 35% and shortening analytics turnaround by one week per cycle.

CERTIFICATIONS & TRAININGS

- Analytical SQL for Developers – Oracle 07/2026
- Data Engineering on AWS Foundations – AWS 04/2026
